

Get to Value with Harvey — Rise Build Sheet

A block-by-block guide for rebuilding the scaled customer-onboarding module in Articulate Rise. Prepared by Alex Donnelly.

How to use this

Rise does not import HTML, so this sheet recreates the module in Rise's native blocks. In Rise: New Course → Create from scratch → add one Lesson per chapter below, then add the blocks in the order shown and paste the copy. The standalone HTML file (onboarding-module.html) is the working preview to check against.

Course setup & theme (Harvey look)

Course title: Get to Value with Harvey

Description: Scaled customer onboarding — from access to daily habit. (Independent sample; not affiliated with Harvey.)

Theme colour: Near-black / ink accent (hex ~ #191712) — keep it monochrome and restrained

Fonts: Heading: a refined serif (Rise “Playfair Display”, “Lora”, or “Spectral” if available). Body: a clean sans (Inter / Helvetica).

Cover: Title “Get to Value with Harvey”, subtitle “Scaled onboarding · sample”, ivory/cream cover, minimal.

Navigation: Free navigation or restricted; show the lesson list sidebar.

Lesson 1 — Welcome: what success looks like

► RISE BLOCK: Text

Welcome to Harvey. This short course gets your team from access to a real, repeatable win in your first 30 days — and sets up the value that makes Harvey worth renewing and expanding.

► RISE BLOCK: Text

We run onboarding around one idea: value you can see and measure. Not “logins,” but hours saved on work you already do, and a result a partner would sign off on.

► RISE BLOCK: Flashcard Grid (3 cards) — or a 3-column Note

Week 1: One workflow live, one real win.

Day 30: A daily habit for your power users.

Day 90: Documented ROI — and room to grow.

► RISE BLOCK: Statement — callout / emphasis block

Adoption is the leading indicator of value. Teams that reach a first win fast keep using Harvey — and your Customer Success partner is here to make that happen, not just at kickoff but every quarter.

Lesson 2 — Your first win, this week

► RISE BLOCK: Text

Don't try to boil the ocean. Pick ONE high-value, low-risk workflow your team does constantly, and run it end to end in Harvey.

► RISE BLOCK: Flashcard Grid (2 cards)

Good first workflows: Summarize a long document set. Draft a first-pass research memo. Prep deposition questions from a transcript.

The “first value moment”: The moment a user thinks “that just saved me an hour.” Get there in the first session.

► **RISE BLOCK: Statement / Note** — a “Try it now” prompt

Try it now: Take a non-confidential document you know well. Ask Harvey for a structured summary. Compare it to what you’d have written. Note what it nailed and what you’d refine — that instinct is the skill.

► **RISE BLOCK: Knowledge Check — Multiple Choice**

Question: What’s the goal of your team’s first session with Harvey?

- Configure every available feature
- **Reach one real “that-saved-me-time” win on a familiar workflow ✓ (correct)**
- Roll Harvey out to the entire firm at once
- Replace attorney review entirely

Feedback if correct: Exactly. A fast first win on one familiar workflow is what builds momentum and durable usage.

Feedback if incorrect: Not quite — the aim is a single, fast win on one familiar workflow, not breadth or replacing review.

Lesson 3 — Make it a daily habit

► **RISE BLOCK: Text**

A tool used once is a tool forgotten. Retention — yours and ours — comes from Harvey becoming the default for a few real tasks.

► **RISE BLOCK: Text — bulleted list**

BULLETS:

- Anchor it to existing work. “Every new matter, summarize the record set in Harvey first.”
- Let champions lead. One enthusiastic associate demoing a real win converts skeptics faster than any deck.
- Use the support you have. Office hours, in-product help, and your CS partner are there between sessions, not just at launch.

► **RISE BLOCK: Statement** — callout

Signal we watch together: weekly active use. If usage dips, that’s our cue to step in with a targeted session — not a renewal surprise later.

Lesson 4 — Use it well, and safely

► **RISE BLOCK: Text**

In legal work, trust is the product. Three habits keep Harvey’s output dependable — and keep your firm and clients protected.

► **RISE BLOCK: Flashcard Grid (3 cards)**

Verify: Check facts and citations against source before you rely on them. Harvey grounds its answers — use that.

Protect: Know what data goes where. Keep client and privileged material within approved, firm-sanctioned use.

Human owns it: An attorney reviews and owns every output. AI is a faster first draft, never the final word.

► **RISE BLOCK: Knowledge Check — Multiple Choice**

Question: A research memo from Harvey looks polished and cites three cases. What do you do before it goes out?

- Send it — it’s well written
- **Verify each citation against source and have an attorney review it ✓ (correct)**
- Delete the citations to be safe
- Assume it’s wrong and rewrite from scratch

Feedback if correct: Right. Verify against source and keep attorney ownership — that's what makes AI-assisted work trustworthy.

Feedback if incorrect: Not quite — polish isn't proof. Verify citations against source and keep an attorney in the loop.

Lesson 5 — Grow your value over time

► RISE BLOCK: Text

Once one workflow sticks, expand deliberately. More value per user, and more users, is how Harvey pays for itself many times over.

► RISE BLOCK: Flashcard Grid (3 cards)

Day 30: One workflow is a daily habit for your power users.

Day 60: A second workflow added; a neighboring team trying it.

Day 90: Documented time saved; a value review with your CS partner.

► RISE BLOCK: Text / Statement — *the quarterly review*

Your quarterly value review: Each quarter, your CS partner brings the data — usage, time saved, where you're getting the most lift — and you plan the next expansion together. That review is where adoption turns into a renewal you feel good about.

► RISE BLOCK: Knowledge Check — Multiple Choice

Question: What turns steady usage into a confident renewal and expansion?

- A bigger discount at renewal time
- **Documented value plus a quarterly review that plans what's next ✓ (correct)**
- Adding every feature whether used or not
- Waiting until the contract is nearly up to talk

Feedback if correct: Yes. Evidence of value, reviewed regularly, makes renewal a formality and expansion an obvious next step.

Feedback if incorrect: Not quite — it's documented value plus a regular forward-looking review, not discounts or last-minute scrambles.

Lesson 6 — Your 30-day plan

► RISE BLOCK: Checkbox List — *Rise "Checkboxes" interactive block*

ITEMS:

- This week: pick one workflow and reach a first win.
- Weeks 2-3: make it a daily habit; name a champion per team.
- Week 4: add a second workflow; note time saved.
- Day 90: value review with your CS partner — results and what's next.

► RISE BLOCK: Statement — *closing callout*

Meet your Customer Success partner. Between sessions, we monitor your team's health, run office hours, and bring the value story to each review. Reach out any time — helping you get and stay successful is the whole job.

Tip: Rise's "Knowledge Check" blocks are ungraded (great for learning). If you want a scored gate, use a "Quiz" lesson at the end instead and move the four questions there.
