

Account Success & Renewal Plan

Scaled Customer Success — a sample for Harvey · prepared by Alex Donnelly

Illustrative work sample built for the Scaled Customer Success Manager application. The customer below is fictional; figures are illustrative and not based on Harvey's actual pricing or data.

ACCOUNT SNAPSHOT

Field	Detail
Customer	Meridian & Cole LLP — ~220-lawyer business-litigation & corporate firm (fictional)
Segment	Scaled (pooled / digital-led CS) · 180 licensed seats
Contract	12-month term · renews 31 Mar 2027 · single practice-group entry point (Litigation)
Stakeholders	Exec sponsor: COO · Champion: Director of Practice Innovation · Power users: 6 litigation associates
Primary use cases	Document review & summarization, first-draft research memos, deposition prep
Targets	Gross retention 100% · Net revenue retention 120% (expand to Corporate + add seats)

HOW I'D DEFINE AND DRIVE SUCCESS

Success for a scaled account is value realized, on repeat: usage that becomes a daily habit, documented ROI the sponsor can defend, and a renewal that grows. Adoption is the leading indicator — so I run this account on a simple loop: drive adoption → evidence the value → de-risk the renewal early → expand on proof. At scale, that means productized, one-to-many enablement (self-serve onboarding, office hours, use-case templates) reserved high-touch only for the moments that move the number.

LIFECYCLE PLAN & MILESTONES

Phase	Window	Focus & milestones	Success metric
Onboard	Days 0–30	Provisioning, exec kickoff, champion enablement, first 2 workflows live	≥70% of seats activated; first value moment logged
Adopt	Days 31–90	Scaled enablement (office hours, self-serve path, templates); first value review	≥50% weekly active users; 3+ workflows in regular use
Realize value	Days 90–180	Quantify ROI (hours saved, matters touched); exec QBR; capture proof points	Documented ROI; sponsor-level QBR delivered
Renew & expand	Days 180–365	Open renewal early (T-120); pilot Corporate group; propose seat add + multiyear	Renewal closed; NRR ≥ 120%

HEALTH SCORING & CHURN SIGNALS

Signal	Healthy (green)	At-risk (red)	Intervention play
Adoption	WAU ≥ 50%, steady	WAU < 25% or falling 3 wks	Targeted re-onboarding; champion co-hosts a use-case office hour
Breadth	3+ workflows, 2+ teams	Single workflow, 1 user pocket	Map a second high-value workflow; enable an adjacent team
Sentiment	Champion advocates	Champion quiet / NPS drop	Exec check-in; surface and close top friction items
Champion	Engaged, has budget voice	Champion departs / reorg	Multi-thread to 2–3 new

			stakeholders fast
Commercial	On track, value shown	No ROI story by T-120	Build the value review now; reset success plan with sponsor

EXPANSION TRIGGERS (NRR)

- Seat utilization > 85% sustained → propose a seat add before users hit the cap.
- A second practice group asks for access (Corporate) → scoped pilot → cross-sell.
- New high-value use case adopted → land/expand into the team that owns it.
- Client-driven demand or firm headcount growth → multiyear + volume conversation.

RENEWAL MOTION (DATA-DRIVEN CADENCE)

- T-120: open internal renewal review; confirm ROI story and risks; align with Sales.
- T-90: deliver value review / QBR to sponsor; pre-frame renewal + expansion.
- T-60: paper the renewal and expansion proposal; resolve procurement early.
- T-30: confirm signature; schedule the next-term success plan and kickoff.

Operating cadence: weekly health-metric scan across the book · monthly champion check-in + open office hours · quarterly value review / QBR.
